PROFESSIONAL SUMMARY

Generative AI Engineer specializing in building applications powered by large language models, retrieval-augmented generation, and prompt engineering. Hands-on experience with LLM fine-tuning, embedding models, vector databases, and production GenAI pipelines. NVIDIA-certified in Building RAG Agents with LLMs. AWS-trained in Generative AI Essentials and Prompt Engineering. Skilled in designing intelligent systems that leverage foundation models for real-world applications across document understanding, content generation, and conversational AI.

TECHNICAL SKILLS

- Generative AI: LLM Fine-Tuning, Prompt Engineering, RAG Pipelines, Embeddings, Foundation Models
- LLM Frameworks: LangChain, LLM Integration, Agentic Workflows, Vector Databases
- ML/DL: PyTorch, TensorFlow, Keras, Transformers, CNN, RNN, LSTM, GANs
- Data & Analytics: Pandas, NumPy, Feature Engineering, Jupyter, EDA
- Programming: Python, SQL, C, R, HTML/CSS
- Cloud Platforms: AWS (GenAI, Prompt Engineering), Oracle Cloud, MongoDB
- Certifications: NVIDIA RAG Agents, AWS GenAI Essentials, AWS Prompt Engineering

PROFESSIONAL EXPERIENCE

Research Intern - AI/ML - NIT Calicut

Jun 2024 - Dec 2024

- Developed and evaluated transformer-based models for complex predictive tasks using PyTorch, achieving rigorous performance benchmarks
- Collaborated on cutting-edge AI research focused on neural network optimization and deep learning applications for engineering problems
- Conducted comprehensive data analysis, feature engineering, and model validation using scientific computing libraries
- Assisted in documenting research findings and preparing technical reports for publication

PROJECTS

Agentic AI System - RAG Pipeline

Built production-grade RAG pipeline combining LLM-based retrieval, reasoning, and response generation with vector database integration for intelligent document understanding. Context-aware prompt engineering for accurate, grounded responses.

Techn

Seismic Response Prediction - Transformer

Developed Temporal Fusion Transformer for time-series prediction, applying generative modeling techniques to engineering data. Achieved 22% improvement over traditional ML baselines.

Techn

SAINT Model - Attention Mechanisms

Implemented self-attention and intersample attention architecture for tabular data classification, demonstrating advanced understanding of attention-based generative and discriminative models.

Techn

EDUCATION

B.E. in Artificial Intelligence & Machine Learning

Yenepoya Institute of Technology, Moodbidri (VTU) | Expected 2026

CERTIFICATIONS

- IBM Python for Data Science (Credly Verified)
- Machine Learning with Python - IBM Cognitive Class
- Deep Learning Fundamentals - IBM Cognitive Class
- Accelerating Deep Learning with GPUs - IBM Cognitive Class
- Supervised Machine Learning - Coursera
- Building RAG Agents with LLMs - NVIDIA
- AWS Generative AI Essentials - AWS
- AWS Prompt Engineering - AWS
- Oracle Cloud Infrastructure 2025 AI Foundations Associate
- Accenture Data Analytics Simulation - Forage
- MongoDB Atlas - MongoDB University
- HTML Training - IIT Bombay
